

M. Madhavan Nambiar, IAS

Message

e-Learning is an area which is considered to be the killer application on Internet and also a tool which, if effectively utilized could revolutionize the society into a Knowledge Society. India, which is considered to be having the intellectual capabilities, is contributing immensely in the area of IT globally and is a hub for developing e-Learning Technologies.

It is well understood that use of ICT in education would be helpful in improving the quality of education and can bring the experts knowledge to anywhere, anytime. In the context of our country, this would help in adding value to the rural education and an opportunity to enhance the values not only in conventional education but also in other forms of non-formal education, training in sectors like social and health.

I have seen the issues that are being covered by this National Seminar (ELELTECH INDIA 2005) in the areas of content development delivery & standards, e-Learning and its societal impact, Learning grids and new technologies, quality assurance etc. and I feel they are well thought of and are being addressed at the right time. I am sure that next few years will see the growth of e-Learning in our country for the immense benefit of human kind & hope that this seminar will work out a 'Roadmap'.

I wish the Seminar a grand success.

(M. Madhavan Nambiar)
