MESSAGE

Education has a vital role to form a knowledge-based society. It has already been proven that technology would uplift the standards of the society. Adding to it, with the evolution of Information Technology, we are experiencing tremendous growth in learning technologies for both individuals and organizations.

E-learning has assumed lot of significance in this context. It has brought a global paradigm shift in learning through Information Technology. Institutions have started e-learning mode of education as part of their curriculum at various levels. Virtual University is a new concept to open the opportunities for International studies. Multimedia is significantly contributing to the quality of content. In this context a seminar on e-learning tools and Technologies is very much relevant.

C-DAC's initiative to organize a National seminar on "e-learning and e-Learning Technologies India 2005" in collaboration with Ministry of Communications and Information Technology, Government of India, would be very useful in this new era of anywhere, anytime learning. The seminar is well structured with good coverage of topics on content Authoring and standards, new technologies, societal impact of e-Learning, quality Assurance etc. I congratulate C-DAC, Hyderabad for this initiative and wish the seminar a success.
